Subject line: Important Fire and Security Information for Your Business

Important news about Fire Alarm maintenance

It's quite surprising how many business owners and managers, are still unaware about the law concerning how often a fire alarm system should be inspected. Legislation states all premises subject to The Regulatory Reform (Fire Safety) Order 2005, should have the means of raising the alarm in the event of fire.

What the law says...

An electronic fire alarm system must be maintained in accordance with BS5839. The British Standard also includes a section on maintenance, which states there should be periodic inspections by a competent engineer at an interval of no more than six months.

Is your Fire Alarm Inspection due?

Before you check, you might be interested to know that Fortech Fire & Security can beat your usual fire alarm maintenance cost or upgrade by 10%.
